

Guess What is Going to Happen Here?

- A. Backhoe loads material from ground into rail car
- B. Backhoe unloads material from rail car to ground
- C. Backhoe loads itself into rail car??!!!

Would you believe "C" ?!

I suspect the manufacturer didn't have this in mind when designing the backhoe. And it's not clear what "Mr. Backhoe" is going to do while he's up there, or how he plans to get back down...

For Your Consideration:

Is this someone you want working on your team?

Is he the answer to your prayers (Mr. Action Man)?

or

Is he your worst nightmare (Mr. Excessive Risk Taker)?

There may be a fine line between ingenuity and stupidity

Where are YOU operating?
